

IML Tree Labels

Application, benefits, and practical use cases

With Passion and Precision

Knapstein & Klinger Tree Care

About the Company: Industry, Areas of Expertise, and Services

We are a two-person tree care partnership. Our services cover all aspects of tree care.
From tree planting and pruning to crown reduction, tree inspections, and tree removal, we provide professional advice and reliable implementation.

Practical Application and Benefits of IML Tree Labels

For the tree inventory of LEG Immobilien SE across more than 1,600 properties, we use IML tree labels. With 200 to 300 trees recorded per day, the IML system with its hammering aid significantly supports us in efficiently numbering the trees.

Advantages and Key Features of IML Tree Labels

The tree labels provide clear and durable identification of individual trees. The pre-embossed numbering, combined with the Youtilly tree management system, simplifies the assignment of tree numbers.

Making Work Easier with the Right Accessories

The hammering aid and tree label dispenser make it possible to quickly record large numbers of closely spaced trees. The hammering aid also allows the labels to be installed at greater heights, helping to protect them from vandalism.

What Makes IML Tree Labels Special

The hammering aid and tree labels are manufactured to a high standard.

Benefits of Our Tree Labels and Accessories

Tree Labels

- Made from anodized aluminum
- Custom laser engraving, also available on both sides
- Sequentially numbered, with optional additional text

Hammering Aid

- Installation at a safe height using the long handle
- One-strike system
- Click-lock system for securing nails and labels
